Rochefort									

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

REMARKS.

Wednesday. In Scotland barometrical pressure has continued to rise slightly since the afternoon of yesterday, but on our other coasts readings are a little lower. Pressure is uniformly high: the lowest recorded is at Stornoway.

Temperature continues almost unchanged.

Winds are still light and variable.

Mist is reported from places in the S and W. The weather is generally fine and dry.

2 PM: Pressures have scarcely changed since the morning. Winds are very light

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

REMARKS.

Thursday.

Pressure is still very uniform: there is hardly any change to note since yesterday. A tendency to fall is shown in Ireland.

Temperature is unchanged.

Winds are generally light and variable. In the south of England they are easterly.

Weather is fine, but slightly misty and hazy in places.

2 PM: Pressure has diminished at all stations since the morning, more especially in Scotland; and some wind from the S.E. has sprung up in the Channel.

W.S.

(See note tomorrow)

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

REMARKS.

Friday.

The diminution in the atmospherical pressure noticed yesterday, has continued at all stations, and readings now in the western districts are about 2 tenths of an inch lower. Pressures continue rather high: they are highest in the S.E. of England.

Very little change in temperature is observable.

The S.E. wind which arose yesterday afternoon continues with moderate force in the SW. of Ireland, and on the Channel Coast, and shows a tendency to veer to South.

The weather continues fine, but much mist is reported on our western coasts and in the Irish Channel.

2 P.M. Pressures have become less since the morning, and winds on our western coasts have veered towards SW.

W.S.

It seems to me that this Hearts Cont^t Message is the same as yesterday's — a mere repet^n

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Saturday.

Barometrical pressures were diminishing yesterday afternoon: this diminution has been general, and of greatest extent on our E. coasts, where readings are upwards of 2 tenths of an inch less than they were yesterday morning. The lowest pressure is at Nairn, and is nearly 3 tenths below that at Plymouth.

The change in temperature has been a slight rise in the W. of Ireland.

In the S. of England the wind is very light and variable, whilst in the other portions of these islands there is a prevalence of light southwesterly wind.

Mist is reported from northern and western stations. Fine and dry weather continues.

2 P.M. Pressure has continued to decrease, except in the N of Scotland, where a slight increase is reported.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance

Monday.

The barometrical pressure at southern and western stations has changed but little since Saturday: on our N and E. coasts the diminution which has taken place has been about 2 tenths of an inch. Since last Evening pressures in the W. of Ireland and on W. coast of France show a tendency to rise. There is now a difference of half an inch between readings at Aberdeen and Brest.

Temperatures continue high, especially on our southern coasts.

Winds yesterday were mostly from the westward: a moderate wind from W to NW is prevalent this morning.

Some rain has fallen on our N and W. coasts. Weather is overcast, with mist and fog in places.

2 PM: Very little change in pressures since the morning.

Sea disturbance.

REMARKS.

Tuesday.

Pressure has decreased everywhere since last night, and readings are lower than they were yesterday at all stations, except those in the N. of Scotland. The change has been greatest in the West, and at Valencia has amounted to nearly half an inch. The difference between the readings at Valencia and Rochefort is nearly half an inch.

Temperature has diminished generally, and to the greatest extent in Scotland.

Yesterday there was a prevalent westerly wind – varying from NW to SW. This morning on the Irish Coast and in SW of England the wind is fresh from the SW, but in the N. it is moderate and has veered to the NE.

Fog is reported from southern and western stations. Rain has fallen in Scotland and Ireland.

Warnings issued to West & North coasts.
{ omitted in P.M. issue of Report }

2 PM:

In the N and E. there has been but little change in pressure since the morning, whilst a considerable diminution has occurred in the S.W.

Warnings were issued this morning to W and N coasts.

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Wednesday.

Since last evening there has been a considerable diminution in atmospherical pressure in the S. of England and in France. Readings at southern stations are more than half an inch lower than they were yesterday morning, whilst those in the N. of Scotland are slightly higher. The reading at L'Orient is half an inch less than that at Nairn. Pressures in the W. show a tendency to rise since last night.

Temperature has fallen considerably on the E. coast of England.

Last evening a strong S. Westerly wind arose at the entrance of the English Channel, which was succeeded on our W and NW coasts by a gale from the NE. A north easterly gale is reported this morning at Holyhead and Scarborough. On the W. coast of Ireland the wind is now fresh from the same quarter.

During the last 24 hours much rain has fallen on our northern and western coasts. Snow showers are reported from the north of Scotland. There is a high sea in the Bay of Biscay and at Brest.

2 P.M. ... Since this morning there has been a slight rise in pressures on the western coasts. A strong Easterly wind is still blowing at Scarborough.

Warnings were issued this morning to the E. coast.

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Thursday.

Atmospherical pressures have continued to rise at all our stations since yesterday, and since last evening the increase has been large in the S. of England. In the south-western portion of these islands readings are now higher by nearly half an inch. The greatest pressure reported is at Valencia, and exceeds the minimum, at Brussels, by more than 6 tenths of an inch.

There has been a considerable diminution in temperature in the W and S.

The N.E. gale reported yesterday from Holyhead has moderated somewhat, but that reported from Scarborough extended during the night to all the south-eastern stations, and was most severe at Yarmouth, where it is still blowing. Winds are generally N. Easterly, and strong in places.

Snow and hail have fallen at places on the N and E. coasts. At Valencia frost is reported. The sky is generally cloudy.

2 PM: Since the morning pressures have increased - mostly in London. Winds continue northerly and have moderated.

Saturday.

The reports yesterday showed that the low pressures which has prevailed at southern stations had disappeared. This morning the barometrical pressures over our islands are high and uniform, showing little change since last evening. Their distribution has changed during the last 48hrs: the higher readings now exist more to the northward.

A rise in temperature has occurred in the N and W of our islands, whilst in the S. of France the weather is colder.

There has been a prevalence of Easterly wind, from light to moderate, during the last 2 days. This morning winds are still light but variable, except in Ireland, where they are southerly.

Weather is generally dry - fine in the N, but cloudy elsewhere. Frost is reported from Paris, and mist in the S.W. of England.

2PM: The afternoon reports show little change since the morning

Sea disturbance.

Monday.

Atmospherical pressure is very uniform in amount and has changed but slightly during the last 48 hours. Sunday's readings showed a slight decrease and this morning's an increase of nearly the same extent.

Temperature is much the same as it was on Saturday.

Winds are very light, and the weather is fine.

2 P.M. – Pressure is rising everywhere except in London.

Sea disturbance.

Tuesday.

Atmospherical pressure over our islands this morning is uniform and high: the readings show a slight but general increase during the last 24 hours.

Temperature in the N. is a little lower than it was yesterday.

Winds have been, and are still, very light.

There has been a prevalence of mist in the N and W, but fine and dry weather is now reported.

2 PM:

Pressure has increased since the morning excepting in the North.

Sea disturbance.

Wednesday.

Atmospherical pressure over our islands still continues high, but is not so uniform as it was yesterday: there has been a slight decrease in the extreme north, and an increase of 2 tenths of an inch in the S. The difference of readings between Valencia and Nairn is 3 tenths:

Temperature has risen in Scotland and Ireland.

Winds continue light and variable.

The weather is generally cloudy, with fog and mist prevailing in places.

2 PM: Pressure has decreased slightly since the morning on the N and E. coasts.

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Thursday.

A diminution in atmospherical pressures has taken place at almost all stations since yesterday, to the extent of more than 2 tenths of an inch on the E. coast of England, but slightly on our N and W coasts. The lowest pressures are to the Eastward, and are exceeded by those in the S.W. of Ireland by about 3 tenths.

Temperature, which has considerably increased on the S and SE coasts of England, is now generally high in these islands.

Winds this morning are light to moderate, with directions from NW to W.

Some rain has fallen on our E. Coasts. Mist and fog are reported from places in the South and West. The weather is cloudy.

2 PM.

Pressure has diminished on all coasts since the morning, except in the SW of Ireland. A strong northerly wind has sprung up at Penzance.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Friday.

Since last evening pressures have continued to decrease, chiefly in the West, and this morning readings are lower at all stations: the difference amounts to a quarter of an inch in Ireland.

Temperature has fallen on our N and E. coasts.

With the exception of a strong northerly wind at Penzance the winds yesterday were moderate from the westward. This morning a wind from NW prevails on our Channel coast, whilst in the SW of Ireland it is moderate, and from W to SW.

The weather has been generally overcast with some rain.

2 PM:

Pressure has decreased at all stations since the morning. Winds continue westerly

Rochefort									

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Saturday.

The general diminution in pressure occurring yesterday has continued, and has attained considerable extent in the S.W. of Ireland: the reading at Valencia this morning is half an inch below that of yesterday. On our E. coast little change has occurred. The difference between Valencia and Rochefort is 3 tenths of an inch.

Temperature has generally diminished, but slightly.

Winds from NW to SW have been prevalent, but this morning the wind is light and variable on the Channel coast. On the Irish coast a high wind from the southwards has set in.

Fog has prevailed in the SW. Rain has fallen in places. The sky is generally overcast.

2 P.M. – Pressure still diminishing, chiefly on west coast. Wind at Penzance is strong from the S.

Warnings issued this morning to west and Channel coasts.

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Monday.

The serious decrease in atmospherical pressure, noticed in Ireland on Saturday, has extended to Great Britain. In the South of England the decrease has exceeded 1 inch within the last 48 hours: in Scotland it is nearly as great. Since last night, however, pressure, which is ~~very low~~ everywhere, has recovered itself in the W. of Ireland, and has increased about 2 tenths of an inch; but on our S.E. and E. coasts it still continues to fall rapidly.

Temperature has risen at continental stations: in the British Isles the change since Saturday is not important.

The wind increased yesterday to a gale from the S. at southern stations; and a S.E. gale was felt on the East coast of England. A westerly gale continues this morning in the English and Irish Channels, ange in the Bay of Biscay. Wind is WNW at Valencia.

The fall of rain during the last 24 hours has been heavy at stations in the S.W. A high sea is reported from places on the S. and E. coasts. Weather is very unsettled.

(~~Warnings issued to coasts not warned on Saturday.~~) Omitted in the afternoon issue.

2 PM:

Pressures are increasing at all stations – rapidly in the SW of England. The N. Westerly gale at Penzance continues.

This morning all coasts had been warned.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Tuesday.

A continuous increase in atmospherical pressure has occurred at all stations except in Scotland, where, since last night, there has been a diminution. The increase at southern stations has been upwards of half an inch, and in the S.W of Ireland Readings are more than 2 tenths higher. The difference between pressures at Aberdeen and Rochefort is 1·25 in.; but readings at Yarmouth and Valencia are nearly equal.

Temperature is higher in England and Ireland, whilst in the N. of Scotland it is a little lower.

Yesterday there was a continuance of the westerly gale, reported in the morning, in the South and west: it was most severe at Valencia. The gale still continues westerly in the SW of Ireland, whilst in the Irish Channel its direction is SW. At Brussels also a southerly gale is now reported.

Rain has been general, and very large in amount on the southern and S.E. coasts of England, and on the Irish coast.

Lightning is reported from Valencia.

The weather is unsettled.

2 PM:

Since the morning pressures have increased. The westerly gale has increased in strength, and has extended itself to Greencastle and Scarborough.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Wednesday.

Since yesterday atmospherical pressure has increased in Scotland to the extent of more than half an inch. In the southern and western districts, although the readings show some increase during the last 24 hours, yet pressures have diminished a little during the night. The least pressures now exist in the N: the difference between those at Nairn and Rochefort is 6 tenths of an inch.

Temperature is higher in the North of Scotland.

The gale extended during yesterday to the N of England, and to Scotland: it continued in the Channel but went down in the S. of Ireland. This morning winds are lighter, but have backed to SW in the South: they are fresh in the Channel with a high sea.

Rain has fallen at nearly all our stations, and is reported from several places as continuing. The sky is generally overcast.

2 PM: Pressure has increased in Scotland and at Valencia, but in England and at Greenwich it has diminished.

At Penzance the SW wind has increased to a gale, but the barometrical differences are not great.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Thursday.

The change in barometrical pressure during the last 24 hours has not been of great importance: in the SW. of Ireland, and in the S. of England an increase has taken place since last night, whilst on our E. coast pressures have decreased somewhat. In Scotland pressure continues low, and readings in the N. are 0·7 in. lower than at Rochefort.

Temperatures are much the same as they were yesterday.

During yesterday the wind freshened to a gale from SW at a few stations, but this morning it has moderated everywhere. In the English Channel a fresh westerly breeze is blowing, while in the N the wind has veered to NW.

The fall of rain, which has been general, was heavy in the W. of Ireland and at Leith.

Weather is cloudy. Thunder is reported from Rochefort.

2 P.M.

Pressure has risen at all stations, nearly to the same extent. Winds are light.

W.S.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Friday.

A very sudden and extensive diminution of pressure has taken place since last night in the S and SW, and readings at stations at the entrance of the Channel are now low; whereas the increase noticed yesterday afternoon has continued at the northern stations. The distribution of pressure has consequently changed since yesterday: – the least reading is at Penzance, and is 3 tenths of an inch below that at Nairn.

Temperatures are nearly uniform, but have fallen slightly in the Channel.

The prevailing winds yesterday were westerly, and were strong in the S. of England. This morning winds are very variable in direction and strength: in the N they are light from the West, but on the Irish coast an easterly breeze is blowing. In the SW. of England a high S. Easterly wind has set in. A Northwesterly gale is reported from Corunna.

Thunder and hail are reported from places. Rain has fallen – chiefly on the Channel coast, where there is a high sea.

Warnings issued this morning to Irish Channel and to S and E. coasts.

2 PM: Pressure has diminished since the morning in the S. and SW of England. At Penzance a strong easterly wind with a very high sea is reported. At L'Orient the South wind has increased to a gale.

Sea disturbance.

REMARKS.

Saturday.

The barometrical depression noticed yesterday as prevalent in the South has disappeared, and this morning an increase is observable at all stations. It has been very rapid within the last 12 hours on the Channel coast. Readings this morning are at present more uniform than they have been, but there are still signs of the existence of considerable disturbance owing to the sudden changes which have taken place.

Temperature is rather low on our N and E coasts, a diminution having occurred since yesterday.

A gale from the S.E. blew yesterday in the Channel, but on the W coast of France its direction was S. Westerly. This morning the winds are light to moderate, having directions between N and W.

Much rain has fallen in the S. of England. The weather is cloudy in the N, but is finer on the Channel coast. A very high sea prevailed yesterday on our S and SW coasts.

2 PM:

The increase of pressure has continued on all coasts except in the NW – at Greencastle – where a considerable diminution has occurred since the morning.

Rochefort										

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

REMARKS.

Monday.

Barometrical readings over these islands are rather high except in the N, and since last evening there has been no change of importance. Pressure is now decreasing in the W and N. The difference of readings between Brest and Nairn is nearly half an inch.

The weather yesterday was somewhat warmer than on Saturday: to-day temperatures are lower in some places.

The wind has been moderate during the last 48 hours except in the N. Coast of Spain, where a northerly gale is reported from Biarritz. Southwesterly winds are now generally prevalent, and in the Channel are light, but are fresh on the western coasts.

Weather is now overcast. A little rain has fallen. Thunder is reported from Scarborough.

2 PM.

Pressure on the SW of Ireland has increased since the morning: on our other coasts readings are lower. At Penzance the wind has veered to West and is stronger.

Sea disturbance.

Tuesday.

Atmospherical pressures are everywhere lower than they were yesterday excepting at the southern Continental stations; but on our N and E coasts barometrical readings are now higher than were shown last evening. The decrease at Valencia since last night has been 0·34 in. The greatest pressures are in the south – the least in the North of Great Britain: at Nairn the reading is nearly 0·7 in. below that at Biarritz.

Temperature is now higher on the S.W. coast of Ireland, whilst in other regions of these islands it is somewhat lower.

Strong S.W. winds were prevalent on our Coasts yesterday, and this morning the direction is still from the westward, but their force is less, and they are backing in Ireland. A high westerly wind is reported from Helder and Brussels.

Rain has fallen on all coasts, and in heavy amount in the S. of Ireland. Thunder, lightning and hail are reported from several stations; and Aurora was observed in London. The sea is high at Corunna.

2 PM:

Pressure has decreased on all coasts except in the South West, where it has risen.
Warnings issued to west and south Coasts

Sea disturbance.

Wednesday.

The decrease in pressure noticed yesterday in the W. of Ireland did not reach serious proportions, but a considerable diminution took place in Scotland yesterday, while pressures in the southwest have increased rapidly. The difference between readings at Nairn and Wisrity exceeds an inch.
Warnings were issued yesterday to the W and S coasts: they are repeated to-day to the E. coast.

Temperature continues low on our N and E coasts: in the South and S.E. of England a considerable rise is shown.

A gale from the West blew on the W. coast of Scotland yesterday: the westerly wind was also strong on the S. coast of England. Winds this morning are generally fresh from the westward, and at Greencastle there is a gale from the same quarter.

Much fog and mist have prevailed in the western districts. Thunder is reported from Ardrossan.

2 PM.

Pressure has diminished at Nairn and Valencia since the morning. A high wind prevails on the N. coast of Ireland, where pressure has increased; and at Scarborough the force of the wind is greater.

Barometer corrected and reduced to 32° at sea level. The letters r. (rising), f. (falling), s. (steady), indicate direction of motion of the mercury within last 14 hours. Thermometer exposed in shade. Extreme Force with its Direction during last 24 hours. Z.—calm. Weather: b.—blue sky; c.—clouds (detached); f.—fog; h.—hail; l.—lightning; m.—misty (hazy); o.—overcast (dull); r.—rain; s.—snow; t.—thunder. Rain-fall, snow or hail (melted), during last 24 hours. Sea disturbance.

Thursday.

The distribution and amount of barometrical pressures differ somewhat from those of yesterday morning: there has been an increase in Scotland, the diminution taking place yesterday afternoon having been succeeded by a rapid increase during the night. Readings in the south show a decrease. The difference between Nairn and Biarritz is still 0·9 in, and the reading at Skudesnas is very low.

Temperature has increased in Scotland: on other coasts it is generally high.

On our N. and E. coasts during yesterday a strong wind from the westward prevailed, increasing to a gale at several stations. The gale has veered to NW. and is still blowing on our Eastern coasts, and at Brussels there is a S. Westerly gale. On the Irish coast and in the Channel the wind is fresh from the west.

Fog and mist have prevailed in the W. and S. The sky is now generally cloudy or overcast.

2 PM:

Pressure has increased since the morning at all stations, and chiefly at Nairn. At Valencia the wind has veered to WSW and increased in force.

W.S.
